PLATFORM GUIDE

EventFlow

A walkthrough for attendees and organizers. How to sign up, find events, register, collect tickets, and run your own.

EventFlow

Revision 1.0 · Generated 22 April 2026

What is EventFlow?

EventFlow is a multi-tenant event management platform. Universities, companies, and community organizations use it to publish their events, collect registrations, take payments, check people in at the door, issue certificates, and run feature modules like live quizzes and leaderboards around each event.

The same application serves three distinct audiences, and the interface adapts to who's logged in:

Attendees	Browse events, register, save events for later, show tickets at the venue, collect certificates.
Organizers	Create events with a 6-step wizard, manage registrations, set up coupons, run check-in, issue refunds, build a public website for the organization.
Super admins	Platform operators overseeing all enterprises, organizations, payments, and audit logs.

Getting started

Sign up

1. Go to /signup. Enter your name, email, a password that meets the strength indicator, and your phone.
2. Tick the Terms of Service and Privacy Policy checkbox. Both open in a new tab so you can read them without losing your form.
3. Optionally fill in college or company details — these can be added later from your profile.
4. A 6-digit OTP is sent to your email. Enter it on the verification screen.
5. You land on your dashboard. You're ready to register for events.

Didn't receive the OTP?

Check your spam folder, then use Resend OTP (disabled for 30 seconds after each send to prevent spam). If you're in a local / test environment where email isn't configured, ask your admin to read the code directly from the OTP database table.

Logging in

Two ways to log in on the same screen:

- Email & Password — the classic flow. Forgot your password? There's a link directly under the password field.
- Login with OTP — enter your email, receive a code, enter the code, you're in. Useful when you can't remember your password.
- Single sign-on — the Google and Microsoft buttons at the bottom of the form work if your admin has enabled them.

Finding events

The events catalogue

Open /events to see every published event. Filter by text search, category, or free/paid. Every card lifts and tilts when you hover it — that's intentional, it signals you can click through.

Saving events for later

The heart icon on each card saves an event to your wishlist. If you aren't logged in, you'll be redirected to log in first and sent back to where you were. Your saved events live at /dashboard/saved.

Registering for an event

Free event — the short path

1. Open the event page. The sidebar shows "Register for Free". Click it.
2. Step 1 of the wizard — pick a ticket type (most free events have only one).
3. Step 2 — your name, email and phone are pre-filled if you're logged in. Fill any custom form fields the organizer has added.
4. Step 3 — review your details, tick the Terms & Conditions checkbox, click Confirm Registration.
5. The success screen shows the event title, date, venue, a QR code, and an Add to Calendar button. A confirmation email is sent.

Paid event with a coupon

1. On Step 1, pick a ticket type. A Coupon Code field appears below.
2. Enter the code and click Apply. If valid, you'll see the discount applied to the total.
3. Complete Steps 2 and 3 as above. On the Review step, the button reads "Pay ₹ NNN" with your total after discount.
4. The Razorpay payment sheet opens. Use your card, UPI, or net banking to pay.
5. After a successful payment, the success screen appears and your ticket is generated. Both the payment and the ticket can be found in /dashboard/payments and /dashboard/tickets.

Payment couldn't be completed?

If the Razorpay sheet closes without a successful payment, your registration sits in the Pending state. Go to /dashboard/payments and click Retry Payment on the row — the same Razorpay order is re-used, so you won't be double-charged.

Team events

Some events allow team registration. On the event page you'll see "Team registration · 2-4 members" (or whatever the size limit is). During registration you either:

- Create a team — give it a name and you're given an invite code (e.g. AB7C-3XZP). Share the code with your teammates. The code expires at the event's end date.
- Join a team — enter a code given to you by the team leader. If the team isn't already full and the code hasn't expired, you're added and you show up in the leader's team roster.

Your dashboard

Once logged in, /dashboard is your home. The top row shows animated counters — events registered, active tickets, certificates earned, total spent. Below is a list of your upcoming events with a "Tomorrow" / "in 3 days" / "Starting soon" countdown for anything close.

/dashboard/events	Every event you've registered for — upcoming, past, and cancelled. Cancel from here if the event hasn't started.
/dashboard/tickets	Every active ticket. Click one to see the full-screen QR to show at the door. Download as PDF or add to calendar.
/dashboard/saved	Events you've hearted but haven't registered for yet.
/dashboard/certificates	Certificates issued to you after attending an event.
/dashboard/payments	All payments made through EventFlow, with status and receipts.
/dashboard/profile	Your personal details, avatar, and linked social accounts.
/dashboard/settings	Notification preferences, password change, 2FA.

At the venue

Pull up /dashboard/tickets and tap the ticket for the event you're at. Tap "Full-screen QR". The gate / check-in team scans it and you're checked in.

No signal at the venue?

Tickets are cached offline. Even with no internet, /dashboard/tickets loads your last-synced tickets and the QR renders. An amber banner explains you're offline — the QR still works, because the signature in it is validated on the server's side when the scanner comes back online.

For organizers — the basics

If you plan to run events on EventFlow, you'll first need an organization. Organizations live underneath "enterprises" (one enterprise can contain many orgs — e.g. a university with clubs and departments), but you can also create a standalone org.

Creating your organization

1. Sign up and verify your email as above.
2. Go to /admin/create-org. Fill in the organization's name, URL slug, category (technical / cultural / sports / etc.), contact email, and optional description.
3. On submit, your user is upgraded to Org Admin of that organization. The sidebar now shows the Context Switcher with your org active.

Per-user limit: ten self-service organizations. Contact support if you need to exceed it.

Creating an event

From /admin/org/events, click Create Event. The wizard has six steps:

1. Basic	Title, event URL (slug), visibility, category, tags, short and long descriptions.
2. Date & Venue	Start / end, timezone, in-person venue or online (Zoom / Teams / custom URL).
3. Tickets	Ticket types with price, total tickets available, max tickets per person, optional sale window.
4. Form	Custom form fields — text, select, checkbox, file upload — asked during registration.
5. Media	Cover image, gallery, FAQs, sponsors, rules / terms / refund policy.
6. Review	Everything on one screen. Preview button opens the public event page with a yellow "Preview mode" banner.

When you're happy, click Publish Event. A confirmation dialog asks if you're sure — publishing is visible to the whole internet. Publish again after edits; the URL stays the same.

Running the event

Once registrations start coming in, /admin/org/events/[id] becomes your command center. Tabs cover Overview, Registrations, Check-In, Communications, Analytics. On the day of the event, open the Check-In tab on a phone or tablet connected to the camera — scan each person's QR, it auto-validates against our signed ticket format and admits them.

Troubleshooting

"Event is full"	You tried to register after the last seat was taken. If the event has a waitlist, your registration is added there and you'll be promoted automatically if someone cancels.
"You are already registered for this event"	A registration for your account already exists. Check /dashboard/events — it's probably in Pending or Confirmed there.

QR won't scan at the venue	Ask the check-in person to use Manual mode and look up your registration number. Your ticket is still valid.
Forgot password	/forgot-password — enter your email, check for a 6-digit OTP, set a new password.
Can't see an event you were registered for	It may have been cancelled. Cancelled events disappear from /dashboard/saved but persist in /dashboard/events under the Cancelled tab.

Where to get help

Every event page has the organizer's contact email in the sidebar. Platform-level issues — your account is locked, a payment didn't reach the organizer, a certificate isn't showing up — go to /contact and submit a ticket with the details.
